

Medicine, Public Health and Emergency Preparedness

Ensuring healthy lives and promoting the well-being at all ages is essential to sustainable development. MASHAV, in alignment with the 2030 Agenda Sustainable Development Goal 3, is committed to develop and implement inclusive and resilient health-related programs in order to provide equitable access to quality health services for all.

The State of Israel has developed and implemented high standards for medical systems, technologies and medical knowhow. Based on the experience accumulated in Israel in the field, MASHAV designs and implements professional activities characterized by a long-term approach, focusing on capacity building and community resilience.

In face of the growing global threats and challenges, it is our duty to strengthen the capacity of all countries, in particular developing countries, for early warning, risk reduction and management of national and global health risks.

Over the last years, the international community has given more attention to the provision of health in emergency situations. MASHAV shares with fellow nations Israel's extensive experience in the field of urgent care medicine, trauma care and a highly developed system in preparation for and in response to mass-casualty incidents.

Following are some of MASHAV's professional programs in the field:

Humanitarian Assistance

As an active member of the international aid community, MASHAV is the body responsible for coordinating the State of Israel's official humanitarian assistance program. Drawing on Israel's vast experience in crisis response and field medicine, we rapidly organize and dispatch much needed supplies, medicines and urgent medical assistance in response to appeals from senior sources in the international community as well as to direct requests from affected countries. Along the years, Israel has sent humanitarian relief and assistance to more than 140 countries, saving numerous lives.

Community Resilience

- A Comprehensive Drug Control Strategy: Israel's Model
- Building Community Resilience
- Protection Systems for Early Childhood
- Integrative Approaches for Early Childhood Development in the 21st Century
- Community Services for the Elderly

Public Health

- International Master of Public Health
- Innovations in Women's Health
- Modern Infectious Disease Epidemiology Concepts, Methods and Public Health

Emergency Situations Management

- Decision Making in Emergencies and Mass Casualties Events
- Emergency Situation Preparedness
- Developing and Organizing a Trauma System and Mass Casualties Situation Organization
